YMHS Unit Assembly (Shock Sensor)

**Realizing high rigidity and high precision
A high strength,
high grade shock sensor optimal
for tough use environments**

Features

- 1** Detects shocks from all directions.
- 2** Despite its high rigidity, it is designed for optimal lost motion to alleviate torch deformation during impact and minimize damage to the robot.
- 3** Impact detection of interference objects is set to an optimal sensitivity level to protect the robot. As such, it does not impede the robot's normal movements such as during high-speed air cuts.
- 4** Due to its highly rigid and high precision nature, it offers high reproducibility, which shortens the recovery time following an impact.
- 5** Because the torch clamp portion has been changed, it can use torches of varying diameters, such as for air-cooled or water-cooled applications. (*1)
- 6** By replacing the flange portion, it can be used regardless of the type of robot. (*2)

*1 For use with a Tokin torch. (Ask us for more information in case of using other manufactures torch.)

*2 The standard specs are for the HP/MHt series robots made by Yaskawa Electric. To use it on a robot made by other manufacturers, contact us beforehand. (At times, it might no be possible to mount it on a robot made by other manufacturers.)
